Flutter

What is the Flutter ?

It is a framework work and open source, through which we can program websites and create applications for Android and iPhone at the same time and with one code using some of the functions and widgets .

- And if you don't use Flutter, it will consume more time, effort and money, and if you update, you will do it in all devices according to every language!

Dart

What is the dart ?

It is a programming language that was produced by Google in 2011 and its mission is to build new programs with complex specifications and at the same time be easier to use, and also this language has a dart board that allows the programmer to write and run the program's code in the browser.

For example :-

Without Flutter

With Flutter

Visual Studio Code

What is the visual studio code ?

It is a program used to write many programming languages such as (Java, Python, C++, C#, etc.) and it was released by Microsoft at 1997 and also it is open source and can be installed on many systems such as (Windows, Mac, Linux, etc.) and is also considered A light-sized program on the device so that it does not take up a large size and at the same time is quick to work on running codes.
